

**AnNex**  
Animal Research Nexus

## Welcome to the Final Issue of the AnNex Newsletter

Welcome to the final issue of the AnNex newsletter. As 2023 draws to a close we wanted to convey our deep sense of gratitude for all the interest and support that you have provided our programme since we began our collaboration in 2017. It's been a genuine joy to work with you all and we will deeply miss the conversations and collaborations we have developed together. Thank you.

Though AnNex has formally come to the end of its funded cycle, the team continues to work on and around the topic of laboratory animal science and welfare in various ways. Pru discussed the Animal Research Nexus programme with Science and Technology colleagues at the University of York in September 2023. In November 23, Gail shared AnNex reflections and resources with participants at the *in vivo* Culture of Care week at AstraZeneca and Beth ran a Care-full Stories workshop at the Pirbright Institute. Emma used the Mouse Exchange to start conversations about institutional approaches to the Culture of Care at the University of Southampton and showcased it with engagement specialists at an international geography conference.

Gail is contributing as co-author and steering committee member to the National Programme on Advancing the 3Rs in Switzerland. Their recent position paper in [Frontiers in Veterinary Science](#) underlines the importance of the social sciences and humanities to the future of the 3Rs. Many of us remain involved in initiatives to promote the Culture of Care, for instance Beth has recently contributed to the [International Culture of Care Network](#) and the [3Rs Collaborative](#). We continue to publish academic papers, with recent work from Pru and colleagues exploring how the [public is imagined](#) in animal research, [what counts as animal advocacy](#) for Named Veterinary Surgeons, and how and why they distinguish between ethical aspects of veterinary work in the [spaces of the laboratory versus general clinical practice](#). You can see [our full list of publications to date](#), [engagement activities](#), and [research blogs](#) on soon to be archived Animal Research Nexus website.

In October 2023, Gail, Rich and Rob began to look to the future by exploring how insights from AnNex could inform the development of [non-animal methods in preclinical research](#) (alongside Renelle in her new role at the RSPCA). In early January 24, Rob and Dmitriy will welcome in the new year by presenting the latest iterations of their historical work to a meeting at the Maastricht University themed about '[Laboratory Animal \(Im\)mobilities: relocating pasts and presents of biomedical experimentation](#)' (and continue in their efforts to complete their respective books). We look forward to our collective book '[Researching Animal Research](#)' coming out in January 2024 and anticipate our work will continue to evolve in ways yet to reveal themselves! We would like to wish you all the best for your work and other activities in 2024.
